

Description

6-pin modular connectors on both ends of an unshielded silver satin 28 AWG cable. This cable is intended for connecting a single analog output A2 version of the A2 to the digital SEI bus for the purpose of serial communication; there is no connection from the analog signals on wires 2 and 3 to one of the cable connectors, preventing analog signals from being interpreted as BUSY conditions. This cable is not suited for use in situations where one wants to actually extract and use the analog signals; the cable better suited for that purpose is CA-MD6-SS-MD6.

Ordering Information

CA-MD6A-SS-MD6 -

Length

1 - 500FT (Increments of 1FT)

Notes

- US Digital warrants its products against defects in materials and workmanship for two years. See complete warranty for details.
