Notification Description (Including Extent, Purpose / Reason, and Effect on Form, Fit and Function)

The standard DISK-2 transmissive encoder disk is currently produced with a 3-hole bolt pattern cut into the disk for ID sizes greater than or equal to .472" (12mm). This bolt circle feature will no longer be incorporated on any of our standard DISK-2 encoder disks. The purpose of this change is to create uniformity within our standard disk selection. Please contact us if you have interest in a custom disk with features in addition to the standard ID & OD.

Image and chart below show how the bolt circle feature adjusts as the specified bore (or ID) is changed.

Bore (in)	BCD (in)
0.472	0.744
0.500	0.744
0.551	0.869
0.625	0.869
0.750	0.994
0.875	1.244
0.984	1.244
1.000	1.244
