Notification Description (Including Extent, Purpose / Reason, and Effect on Form, Fit and Function)

As part of our ongoing continuous improvement efforts, US Digital is implementing a change to our packaging options for our E4T and E8T kit encoders. It is important to note that this change will affect the individual and bulk packaging option up to 4 pcs, also known as our packaging options (1), (2) and (B).

We are replacing the current heat-sealed ESD bag packaging with a customized, plastic ESD clamshell. The clamshell is a snap-fit design that is anti-static coated for ESD sensitive environments. This change was specifically designed to enhance the ease of handling for our customers, by providing easy removal and visual inspection of the kit encoder components (see images below).

Current Packaging

New Clamshell Packaging (closed)

New Clamshell Packaging (open)

This change does not affect form, fit or function of the final product.

If you have any questions or concerns about this PCN, please contact our Technical Support Group at 360-397-9999 or email support@usdigital.com.
